1. Introduction

Job design is an important part of organizational management because it determines the work-related responsibilities assigned to employees. Griffin explains job design as the determination of a person's work-related responsibilities and identifies job specialization as the most common traditional approach to designing jobs. However, excessive specialization may create boredom, dissatisfaction, monotony, increased absenteeism, and reduced work quality. Therefore, organizations have developed alternative approaches to job design, including job rotation, job enlargement, job enrichment, the Job Characteristics Approach, and work teams. This report applies the **Job Characteristics Approach** to four different jobs. The approach suggests that jobs should be examined according to five core job dimensions: **Skill Variety, Task Identity, Task Significance, Autonomy, and Feedback**. Griffin states that higher levels of these dimensions are expected to contribute to positive psychological states and, consequently, higher internal motivation, higher-quality performance, greater satisfaction, and lower absenteeism and turnover.

The purpose of this study is to understand how the characteristics of different jobs influence employees' experiences and job-related outcomes. Four job holders are considered in this report. Their routine responsibilities are identified, their tasks are mapped to the five Job Characteristics Model dimensions, and a five-point Likert-scale questionnaire is used to measure their perceptions.

The report also compares the four jobs in order to identify similarities, differences, strengths, and limitations in their job design.

2. Objectives of the Study

The major objectives of this study are:

1. To identify the major responsibilities and routine activities of four different job holders.
2. To map their daily work activities against the five dimensions of the Job Characteristics Approach.
3. To measure the employees' perceptions using a five-point Likert scale.
4. To calculate average scores for the major job characteristics and job outcomes.
5. To examine the relationship between job characteristics and job outcomes.
6. To compare the four jobs and determine which jobs provide stronger or weaker job characteristics.
7. To understand how job design may influence employee motivation, satisfaction, performance, and absenteeism/turnover.

3. Theoretical Framework

3.1 Job Design

According to Griffin, job design determines the work-related responsibilities associated with a position. It specifies what an employee is expected to do and, depending on the job, may also define decision-making responsibilities, goals, expectations, and performance standards.

The traditional approach to job design is job specialization, in which the overall organizational task is divided into smaller components. Specialization can increase efficiency and proficiency, but excessive specialization may result in boredom and dissatisfaction.

The Job Characteristics Approach provides an alternative by considering both the work system and employee preferences. Griffin describes it as an approach in which jobs are diagnosed and improved along five core dimensions.

3.2 Five Core Job Characteristics

3.2.1 Skill Variety

Skill Variety refers to the number of different activities and skills that a person must use in a job. A job requiring employees to perform several different types of activities will generally have higher skill variety.

For example, a software engineer may need programming, debugging, communication, problem-solving, testing, and documentation skills. A highly repetitive job involving only one simple activity would have comparatively low skill variety.

Griffin defines Skill Variety as the **number of things a person does in a job**.

3.2.2 Task Identity

Task Identity refers to the extent to which an employee performs a complete or identifiable part of a larger piece of work.

For example, an employee who develops an entire software feature from planning through testing has greater task identity than an employee who performs only one small step of the development process.

Griffin describes Task Identity as the extent to which a worker performs a complete or identifiable portion of the total job.

3.2.3 Task Significance

Task Significance refers to the perceived importance of an employee's work and its impact on other people.

For example, a teacher may experience high task significance because the quality of their work directly affects students' learning. Similarly, a healthcare worker may perceive high task significance because their work affects patients' well-being.

Griffin identifies Task Significance as the perceived importance of the task.

3.2.4 Autonomy

Autonomy refers to the degree of control and independence an employee has over how work is performed.

An employee who can determine how to complete a task, organize work, or make routine decisions without continuous supervision has greater autonomy.

Griffin defines Autonomy as the degree of control the worker has over how the work is performed.

3.2.5 Feedback

Feedback refers to the extent to which an employee knows how well the job is being performed.

Feedback may come directly from the work itself, from customers or clients, from supervisors, or through performance reports and evaluations.

Griffin describes Feedback as the extent to which the worker knows how well the job is being performed.

4. Job Outcomes

For this assignment, four broad job outcomes are examined:

4.1 Internal Work Motivation

This refers to the employee's internal desire to perform the work well because the work itself is motivating.

4.2 Job Satisfaction

Job satisfaction reflects the extent to which an employee is gratified or fulfilled by their work. Griffin emphasizes that job satisfaction is an important work-related attitude.

4.3 Performance Quality

This refers to the quality with which employees perform their responsibilities.

4.4 Absenteeism and Turnover

For this report, absenteeism and turnover are treated as one combined outcome because the instructor's assignment refers to four major job outcomes. Griffin's Job Characteristics Approach presents this outcome as **low absenteeism and turnover**.

The model presented in Griffin indicates that the five job characteristics can lead to psychological states such as experienced meaningfulness, experienced responsibility, and knowledge of actual work results, which may contribute to positive work outcomes.

5. Research Methodology

5.1 Research Design

The study uses a **qualitative interview combined with a quantitative Likert-scale measurement**.

Four job holders from different occupational backgrounds are considered. For each employee, information is collected regarding:

- personal and professional background;
- organization and job position;
- duration of the interview;
- routine job responsibilities;
- level of Skill Variety;
- Task Identity;
- Task Significance;
- Autonomy;
- Feedback;
- job-related outcomes.

The interview provides qualitative information, while the Likert-scale questionnaire provides numerical measurements.

5.2 Interview Procedure

Each interview begins with a short introduction explaining the academic purpose of the study. The interviewee is then asked about their job, regular responsibilities, decision-making authority, sources of feedback, and perception of their work.

The interview duration should be recorded for each participant.

For privacy, the report may use either the interviewee's real name or an identifier such as **Interviewee A**, depending on the participant's preference.

6. Profile of the Interviewees

Note: The following profiles are illustrative and should be replaced with your actual interview data.

Interviewee	Job Position	Organization	Experience	Interview Duration
A	Software Engineer	Technology Company	3 years	25 minutes
B	Bank Officer	Commercial Bank	5 years	22 minutes
C	School Teacher	Secondary School	7 years	30 minutes
D	HR Executive	Private Organization	4 years	24 minutes

For the final submission, the group should include the actual identity information agreed upon by the interviewees.

7. Interviewee A: Software Engineer

7.1 Background Profile

Position: Software Engineer

Organization: Technology Company

Experience: 3 years

Interview Duration: 25 minutes

The software engineer is primarily responsible for developing and maintaining software applications. The position involves technical problem solving, programming, testing, debugging, communication with team members, and responding to project requirements.

7.2 Routine Job Responsibilities

The major responsibilities identified in the model interview are:

1. Understanding project requirements.
2. Designing software solutions.
3. Writing and modifying code.
4. Testing applications.
5. Debugging errors.
6. Participating in team meetings.
7. Communicating with other developers.
8. Documenting technical work.
9. Reviewing code.
10. Responding to changes in project requirements.

7.3 Task-to-Job-Characteristics Mapping

Routine Task	Skill Variety	Task Identity	Task Significance	Autonomy	Feedback
Requirement analysis	High	Medium	High	Medium	High
Software design	High	High	High	High	Medium
Coding	High	Medium	Medium	High	High
Debugging	High	Medium	Medium	High	High
Testing	Medium	Medium	High	Medium	High
Team meetings	Medium	Low	Medium	Low	Medium
Documentation	Medium	High	Medium	High	Medium

Analysis

The software engineering job demonstrates relatively high **Skill Variety** because the employee must use programming, analytical, communication, testing, and problem-solving skills. This is consistent with Griffin's description of Skill Variety as the number of different things a person does in a job.

Task Identity is also relatively high because the employee can participate in identifiable portions of a software project, from understanding requirements to development and testing.

Task Significance is moderate to high because the employee's work affects the usability, quality, and delivery of software used by clients or other employees.

The employee has relatively high **Autonomy**, particularly during coding, debugging, and technical decision-making, although project requirements and organizational procedures impose some limits. Finally, **Feedback** is high because software engineers receive feedback from testing results, code reviews, users, project managers, and system behavior.

8. Interviewee B: Bank Officer

8.1 Background Profile

Position: Bank Officer

Organization: Commercial Bank

Experience: 5 years

Interview Duration: 22 minutes

8.2 Routine Job Responsibilities

The model interview identifies the following responsibilities:

1. Processing customer applications.
2. Verifying documents.
3. Handling account-related services.
4. Maintaining records.
5. Communicating with customers.
6. Following banking procedures.
7. Preparing reports.
8. Responding to customer inquiries.
9. Coordinating with other departments.
10. Checking compliance with organizational rules.

8.3 Task-to-Job-Characteristics Mapping

Routine Task	Skill Variety	Task Identity	Task Significance	Autonomy	Feedback
Customer service	High	Medium	High	Medium	High
Document verification	Medium	High	High	Low	High
Account processing	Medium	High	High	Medium	High
Report preparation	Medium	High	Medium	Medium	High
Compliance checking	Medium	High	High	Low	High
Customer problem solving	High	Medium	High	Medium	High

Analysis

The bank officer demonstrates moderate **Skill Variety** because the job combines customer service, documentation, record keeping, financial knowledge, communication, and problem solving.

Task Identity is relatively high because many tasks have a clear beginning and end, such as processing an application or resolving a customer request. **Task Significance** is also high because mistakes can affect customers' financial transactions and service experience.

However, **Autonomy** is relatively lower than in the software engineering role because banking employees must operate within established procedures, compliance requirements, and organizational controls. Feedback is relatively high because work can be evaluated through customer responses, transaction accuracy, supervisory review, and performance measures.

9. Interviewee C: School Teacher

9.1 Background Profile

Position: School Teacher

Organization: Secondary School

Experience: 7 years

Interview Duration: 30 minutes

9.2 Routine Job Responsibilities

1. Preparing lesson plans.
2. Conducting classroom teaching.
3. Assessing students.
4. Providing feedback.
5. Preparing examinations.
6. Managing classroom activities.
7. Communicating with parents.
8. Supporting weaker students.
9. Participating in school meetings.
10. Organizing academic activities.

9.3 Task-to-Job-Characteristics Mapping

Routine Task	Skill Variety	Task Identity	Task Significance	Autonomy	Feedback
Lesson preparation	High	High	High	High	Medium
Classroom teaching	High	High	Very High	High	High
Student assessment	High	High	High	Medium	High
Student counselling	High	Medium	Very High	High	Medium
Parent communication	High	Medium	High	Medium	High
Academic activities	High	High	High	High	High

Analysis

Teaching demonstrates very high **Skill Variety** because it requires subject knowledge, communication, planning, evaluation, classroom management, interpersonal skills, and problem solving.

The teacher also has high **Task Identity**, especially when they plan, deliver, assess, and review an entire lesson or course unit. **Task Significance** is particularly high because the work directly affects students' academic development and personal growth.

The teacher often has substantial **Autonomy** in lesson delivery and classroom methods, although curriculum requirements and institutional policies may limit some decisions. Feedback comes from students, examination results, classroom performance, parents, colleagues, and supervisors.

10. Interviewee D: HR Executive

10.1 Background Profile

Position: HR Executive

Organization: Private Organization

Experience: 4 years

Interview Duration: 24 minutes

10.2 Routine Job Responsibilities

1. Recruiting employees.
2. Screening CVs.
3. Conducting interviews.
4. Maintaining employee records.
5. Preparing HR reports.
6. Supporting employee orientation.
7. Communicating organizational policies.
8. Handling employee concerns.
9. Coordinating training activities.
10. Assisting with performance appraisal.

10.3 Task-to-Job-Characteristics Mapping

Routine Task	Skill Variety	Task Identity	Task Significance	Autonomy	Feedback
Recruitment	High	High	High	Medium	High
Candidate screening	Medium	High	High	Medium	Medium
Interviewing	High	High	High	Medium	High
Employee support	High	Medium	Very High	Medium	High
Training coordination	High	High	High	High	High
HR reporting	Medium	High	Medium	Medium	High

Analysis

The HR executive's job has relatively high **Skill Variety** because recruitment, interviewing, communication, reporting, employee support, and coordination require different skills.

Task Identity is moderate to high because many HR activities have identifiable outputs, such as completing a recruitment process or organizing training. **Task Significance** is high because HR decisions influence employee recruitment, development, and organizational functioning.

Autonomy is moderate because HR employees can make some decisions independently but must follow organizational policy and management direction. Feedback is also high because HR activities are evaluated through recruitment outcomes, employee responses, management feedback, and performance indicators.

11. Likert-Scale Questionnaire

A five-point Likert scale was used to measure the interviewees' perceptions.

Measurement Scale

Score	Response
1	Strongly Agree
2	Agree
3	Neutral
4	Disagree
5	Strongly Disagree

Important scoring rule: because this study uses **1 = Strongly Agree** and **5 = Strongly Disagree**, a **lower numerical mean represents a more positive response**. Therefore, an average closer to 1 indicates stronger agreement with a positive statement.

This follows the instructor's stated scale and avoids reversing the scale during interpretation.

12. Questionnaire Statements

A. Skill Variety

Q1. My job requires me to use a variety of skills and abilities.

Q2. My daily work involves different kinds of activities rather than repeating the same activity continuously.

B. Task Identity

Q3. I can complete identifiable pieces of work from beginning to end.

Q4. I can clearly see the complete result of the work I am responsible for.

C. Task Significance

Q5. My work has an important effect on other people.

Q6. I believe that the work I perform is meaningful and important.

D. Autonomy

Q7. I have freedom to decide how to perform many of my work tasks.

Q8. I can make appropriate work-related decisions without continuous supervision.

E. Feedback

Q9. I receive clear information about how well I am performing my job.

Q10. My work provides sufficient feedback to help me improve my performance.

F. Job Outcomes

Q11. I feel internally motivated to do my job well.

Q12. I am satisfied with my job.

Q13. I believe that I perform my work to a high standard.

Q14. I rarely feel like being absent from work or leaving this organization.

13. Scoring Method

For each employee, the response to every statement is recorded from 1 to 5.

For each dimension:

Dimension Mean = Sum of relevant item scores ÷ Number of relevant items

For example:

Skill Variety consists of Q1 and Q2.

If an employee gives:

Q1 = 1

Q2 = 2

Then:

Skill Variety Mean = (1 + 2) ÷ 2 = 1.50

Because 1 represents Strongly Agree, a mean of 1.50 indicates strong perceived Skill Variety.

For this study, the following interpretation may be used:

Mean Range	Interpretation
1.00–1.80	Very High / Strong Agreement
1.81–2.60	High
2.61–3.40	Moderate
3.41–4.20	Low
4.21–5.00	Very Low / Strong Disagreement

This interpretation should always be read together with the direction of the scale: **lower = more positive**.

14. Illustrative Questionnaire Results

The following results are **sample data for demonstrating the report format**.

Dimension / Outcome	Software Engineer	Bank Officer	Teacher	HR Executive
Skill Variety	1.50	2.00	1.25	1.75
Task Identity	1.75	1.90	1.40	1.85
Task Significance	1.60	1.50	1.20	1.45
Autonomy	1.80	2.90	1.55	2.25
Feedback	1.70	1.80	1.65	1.90
Internal Work Motivation	1.60	2.00	1.30	1.80
Job Satisfaction	1.70	2.20	1.35	1.90
Performance Quality	1.55	1.85	1.40	1.80
Absenteeism/Turnover	1.80	2.40	1.50	2.10

The scores above are illustrative and should be replaced with actual interview responses.

15. Overall Job Satisfaction Analysis

For this report, overall job satisfaction is measured using **Q12**. Where multiple satisfaction statements are used, their average may instead be calculated.

Illustrative results

Job	Job Satisfaction Mean	Interpretation
Software Engineer	1.70	Very High
Bank Officer	2.20	High
Teacher	1.35	Very High
HR Executive	1.90	High

Because the questionnaire uses a positive statement and 1 represents Strongly Agree, the teacher's score of 1.35 indicates the strongest agreement with the statement that the employee is satisfied with the job.

The software engineer also reports a high level of satisfaction, while the HR executive reports a positive but somewhat lower result. The bank officer has the highest numerical score among the four, indicating comparatively weaker agreement.

These results are consistent with Griffin's discussion of job satisfaction as a work-related attitude reflecting the extent to which an individual is gratified or fulfilled by work. Griffin also notes that satisfaction is influenced by personal, group, and organizational factors.

16. Analysis of Job Outcomes

16.1 Software Engineer

The software engineer demonstrates relatively high Skill Variety, Task Identity, Autonomy, and Feedback. The employee uses multiple technical and interpersonal skills, completes identifiable project components, and has considerable control over technical decisions.

These characteristics create a job that is relatively rich in terms of job design. The combination of challenging tasks, responsibility, and performance feedback may contribute to internal motivation and job satisfaction. Griffin's Job Characteristics Approach proposes that higher levels of the five core dimensions are associated with high internal motivation, high-quality performance, high satisfaction, and lower absenteeism and turnover.

16.2 Bank Officer

The bank officer reports strong Task Identity, Task Significance, and Feedback. However, Autonomy is lower because the job requires compliance with banking policies and standardized procedures.

The job therefore provides meaningful work and clear performance information but relatively less freedom in how tasks are performed. This may explain why the employee can maintain good performance and satisfaction while reporting comparatively lower overall satisfaction than the other sample participants.

16.3 Teacher

The teacher demonstrates the strongest overall job characteristics in the illustrative data. The role combines high Skill Variety, Task Identity, Task Significance, Autonomy, and Feedback.

Teaching also has direct social impact, which can strengthen the employee's perception that their work is meaningful. The high Task Significance and high Autonomy are particularly important characteristics of this job. The illustrative results therefore show very high internal motivation, job satisfaction, and performance quality.

16.4 HR Executive

The HR executive demonstrates relatively strong Skill Variety, Task Identity, Task Significance, and Feedback. The job requires communication, interviewing, record management, employee support, recruitment, and coordination.

Autonomy is moderate because many HR activities are governed by organizational policies. Nevertheless, the meaningful impact of HR work and the opportunity to interact with employees may contribute positively to motivation and job satisfaction.

17. Comparison of the Four Jobs

17.1 Skill Variety

The teacher has the highest illustrative Skill Variety because teaching combines subject expertise, communication, planning, assessment, classroom management, counselling, and interpersonal skills.

The software engineer and HR executive also demonstrate high Skill Variety. The bank officer has moderate Skill Variety because although several skills are required, many activities are performed within standardized banking processes.

17.2 Task Identity

The teacher and software engineer show relatively strong Task Identity because they can work on identifiable units of work and see the results.

The bank officer also has strong Task Identity because many transactions and applications have clear completion points. The HR executive has moderate-to-high Task Identity depending on the particular HR activity.

17.3 Task Significance

The teacher ranks highest in perceived Task Significance in the illustrative analysis because the work directly affects students.

The bank officer and HR executive also have significant impacts on other people. The software engineer's Task Significance may vary depending on the type of software being developed and who uses it.

17.4 Autonomy

The teacher and software engineer have the highest illustrative Autonomy.

The HR executive has moderate Autonomy, while the bank officer has lower Autonomy because financial services require strict procedures, rules, and compliance controls.

17.5 Feedback

All four jobs provide feedback, but through different mechanisms.

The software engineer receives feedback through testing, code review, and user response.

The bank officer receives feedback from customers, supervisors, accuracy measures, and transaction results.

The teacher receives feedback from students, examination results, classroom performance, parents, and supervisors.

The HR executive receives feedback from managers, employees, recruitment outcomes, and organizational performance indicators.

18. Comparative Summary

Characteristic	Highest Illustrative Job	Relatively Lower Job
Skill Variety	Teacher	Bank Officer
Task Identity	Teacher / Software Engineer	HR Executive
Task Significance	Teacher	Software Engineer
Autonomy	Teacher / Software Engineer	Bank Officer
Feedback	Software Engineer / Bank Officer	HR Executive
Internal Motivation	Teacher	Bank Officer
Job Satisfaction	Teacher	Bank Officer
Performance Quality	Software Engineer	Bank Officer
Absenteeism/Turnover Outcome	Teacher	Bank Officer

The comparison indicates that the teacher and software engineer have relatively enriched job designs, whereas the bank officer's role is more structured and procedure-driven. This does not mean that the bank officer's job is poorly designed. Rather, its lower autonomy reflects the nature of work where standardization and control are important.

Griffin similarly notes that managers must balance organizational demands for efficiency with employees' needs for creativity and autonomy.

19. Major Findings

The analysis produces several major findings.

First, the four occupations differ considerably in their job characteristics. Jobs involving diverse activities tend to demonstrate higher Skill Variety, while jobs allowing independent decision-making tend to demonstrate higher Autonomy.

Second, Task Significance appears particularly important in jobs such as teaching and HR because employees directly influence other people's experiences and development.

Third, Feedback is present in all four jobs, but its form varies. Some employees receive direct feedback from the work itself, while others rely more heavily on supervisors, clients, customers, or formal performance measurements.

Fourth, the illustrative results suggest that jobs combining several strong core characteristics are associated with stronger positive job outcomes. This is consistent with Griffin's presentation of the Job Characteristics Approach.

Finally, specialization and standardization are not automatically negative. Griffin recognizes the efficiency benefits of specialization but warns that extreme specialization may lead to boredom, dissatisfaction, absenteeism, and reduced work quality.

20. Recommendations

Based on the analysis, the following recommendations can be made.

20.1 Increase Skill Variety

Organizations can provide employees with opportunities to perform a wider range of related activities, provide training, and allow employees to develop additional skills.

20.2 Increase Task Identity

Where possible, employees should be given responsibility for a complete or identifiable piece of work rather than only a very small fragment of a larger process.

20.3 Strengthen Task Significance

Organizations should communicate how individual employees' work contributes to customers, colleagues, organizational goals, and society.

20.4 Improve Autonomy

Employees should be provided with reasonable freedom to choose methods, organize tasks, and make appropriate decisions within organizational boundaries.

20.5 Strengthen Feedback

Organizations should provide timely and clear information about performance through supervisors, customers, performance indicators, peer review, and direct work results.

These recommendations are particularly relevant because Griffin identifies the Job Characteristics Approach as an alternative to excessive specialization and emphasizes the importance of improving jobs along the five core dimensions.

21. Limitations of the Study

The study has several limitations.

First, the number of interviewees is small, so the findings cannot be generalized to all employees in those occupations.

Second, the results are based largely on employees' perceptions, and perceptions may differ from objective measurements of performance.

Third, different occupations naturally have different organizational constraints. Therefore, a lower Autonomy score does not necessarily mean that a job is poorly designed.

Fourth, job satisfaction is influenced by factors beyond job characteristics. Griffin notes that individual needs and aspirations, relationships with coworkers and supervisors, working conditions, organizational policies, and compensation may all affect satisfaction.

22. Conclusion

This report examined four different jobs using the Job Characteristics Approach to job design. The analysis focused on five core job characteristics: Skill Variety, Task Identity, Task Significance, Autonomy, and Feedback.

The findings demonstrate that different occupations provide different combinations of these characteristics. The teacher and software engineer in the illustrative analysis showed relatively strong job characteristics, especially in Skill Variety, Autonomy, and Task Significance. The bank officer demonstrated strong Task Identity, Task Significance, and Feedback but comparatively lower Autonomy because the work is highly structured. The HR executive displayed a balanced combination of job characteristics with moderate autonomy.

The five-point Likert questionnaire provided a numerical method for evaluating employees' perceptions. The qualitative interviews then helped explain why the scores differed across occupations.

Overall, the study supports the usefulness of examining jobs not only in terms of what employees do, but also in terms of how the design of those jobs affects motivation, satisfaction, performance, and absenteeism/turnover. Griffin's Job Characteristics Approach provides an appropriate framework for understanding these differences and for identifying opportunities to improve job design.

Appendix A: Interview Questionnaire

Section A: Background

1. What is your current job title?
2. What organization do you work for?
3. How long have you been working in this position?
4. How long have you worked in this organization?
5. How long can you spend participating in this interview?

Section B: Job Responsibilities

6. What are your main responsibilities?
7. What activities do you perform on a typical working day?
8. Which activities take most of your time?
9. Which task do you consider most important?

Section C: Skill Variety

10. How many different skills do you need to perform your job?
11. Do you perform different types of activities during the day?
12. Does your job require you to solve different kinds of problems?

Section D: Task Identity

13. Do you normally complete a whole task or only one part of it?
14. Can you see the final result of your work?
15. Are you responsible for a complete identifiable piece of work?

Section E: Task Significance

16. Who is affected by your work?
17. How important do you think your work is to other people?
18. Can you describe an example where your work made a significant difference?

Section F: Autonomy

- 19. How much freedom do you have in deciding how to perform your work?
- 20. Can you make routine work-related decisions yourself?
- 21. How closely are you supervised?

Section G: Feedback

- 22. How do you know whether you are doing your job well?
- 23. Do customers, supervisors, coworkers, or systems provide feedback?
- 24. How frequently do you receive feedback?

Section H: Job Outcomes

- 25. Does your work itself motivate you to perform well?
- 26. How satisfied are you with your current job?
- 27. How would you describe the quality of your performance?
- 28. Do you frequently think about being absent or leaving the organization?
- 29. What part of your job do you enjoy most?
- 30. What aspect of your job would you most like to change?

Appendix B: Likert-Scale Response Sheet

Scale:

- 1 = Strongly Agree
- 2 = Agree
- 3 = Neutral
- 4 = Disagree
- 5 = Strongly Disagree

No.	Statement	Score
1	My job requires me to use a variety of skills and abilities.	_____
2	My daily work involves different kinds of activities.	_____

- 3 I can complete identifiable pieces of work from beginning to end. _____
- 4 I can clearly see the complete result of my work. _____
- 5 My work has an important effect on other people. _____
- 6 I believe that my work is meaningful and important. _____
- 7 I have freedom to decide how to perform many of my tasks. _____
- 8 I can make appropriate work-related decisions without continuous supervision. _____
- 9 I receive clear information about how well I am performing. _____
- 10 My work provides sufficient feedback to help me improve. _____
- 11 I feel internally motivated to do my job well. _____
- 12 I am satisfied with my job. _____
- 13 I perform my work to a high standard. _____

Final comparison

Highest Skill Variety: _____

Highest Task Identity: _____

Highest Task Significance: _____

Highest Autonomy: _____

Highest Feedback: _____

Highest Internal Work Motivation: _____

Highest Job Satisfaction: _____

Highest Performance Quality: _____

Best overall Job Characteristics profile: _____

Appendix D: Group Division of Work

Because the assignment requires a group of four, the work can be divided as follows:

Member 1: Interview and prepare Interviewee A

Member 2: Interview and prepare Interviewee B

Member 3: Interview and prepare Interviewee C

Member 4: Interview and prepare Interviewee D

After the four individual sections are prepared, the group should jointly perform the questionnaire scoring, comparison, findings, recommendations, and conclusion.
